EDUCATION

University of Illinois Urbana-Champaign

Bachelor of Science, Computer Science & Statistics (Dean's List)

Aug 2023 – May 2027

Cumulative GPA: 3.91/4.00

SKILLS

Languages & Querying: Python (pandas, NumPy, scikit-learn), SQL (CTEs, Window Functions, Joins), R

BI & Visualization: Tableau, Power BI, Recharts, Webflow, Google Analytics / Search Console

Analytics & Statistics: A/B Testing, Hypothesis Testing, Regression, Forecasting, Churn & Funnel Analysis, Segmentation, XGBoost

Data Engineering & Tools: ETL / Data Pipelines, Git, Docker, Azure, CI/CD, Web Scraping (BeautifulSoup), Power Automate, UiPath

AI & Automation: LLM APIs (OpenAI, Claude), LangChain, LangGraph, CrewAI, RAG, n8n, PEFT, Prompt Engineering, Streamlit

Publication: Steer2Adapt: Dynamically Composing Steering Vectors for Efficient LLM Adaptation — ICLR 2026 Workshop (Accepted)

WORK EXPERIENCE

Pacific Financial Professional Association | *Quantitative Finance AI Intern* | Atlanta, GA

Jun 2026 – Aug 2026

- Rated the credit risk of **150 public companies** end to end, building a 4-layer **Python/pandas pipeline** (acquisition, cleaning, signals, publishing) that turned raw market feeds into analysis-ready daily panels with versioned data-quality checks between layers
- Implemented a **Merton/KMV structural credit model** that converted each company's equity prices and debt into default probabilities and letter ratings, automating the full workflow from ticker to rating table into a single command
- Stress-tested the ratings with a 2,000-scenario bootstrap: rank ordering stayed stable (Kendall $\tau = 0.956$) and tracked agency ratings ($\rho = 0.79$), while letter grades amplified input noise $\times 4,073$, so every published rating ships with a **confidence interval**
- Published the ratings through a **public interactive demo site** with point-in-time safeguards so every signal used only information available on its date (no look-ahead bias); shipped the production release with automated test gates ($\geq 85\%$ coverage)

Earnest Agriculture | *Marketing Analytics & Strategy Intern* | Champaign, IL

Jan 2026 – May 2026

- Boosted organic blog traffic by **40%** (Google Analytics, Search Console) by pairing Webflow layout redesigns with a Generative Engine Optimization (GEO) content strategy targeting AI-search and LLM-referral queries
- Contributed to a **14% YoY increase in organic product sales** by mining Google Trends and internal sales data for demand signals and aligning the content calendar to them
- Scraped a competitor-content dataset (Python, BeautifulSoup; 10+ brands, 1,500+ posts) and built an **LLM scoring pipeline** (OpenAI API) that classified every post by topic, format, and angle in place of manual review; the top-performing patterns it surfaced were adopted into the posting strategy

SeeU International Inc. | *Data Analyst Intern* | Remote

Sep 2025 – Nov 2025

- Parsed 500K+ nested-JSON user-interaction records into relational tables with Python and SQL, and built an **NLP pipeline** that cleaned and **auto-summarized open-ended course feedback**, feeding course-level KPI dashboards and funnel analytics
- Built layered SQL views (window functions, CTEs) computing 10+ enrollment, engagement, and course-profitability KPIs that **directly informed curriculum and pricing decisions**
- Identified retention friction points in the free-to-paid trial funnel and built a class-balanced churn-risk model on platform-engagement features, showing **low-activity users accounted for 61% of total churn** and prioritizing them for re-engagement outreach
- Designed an A/B test and **drove a 15% lift in student engagement** by translating the funnel and churn analysis into recommendations on course offerings and promotion timing

Walt Disney Company | *Operations & Analytics Intern* | Orlando, FL

Jun 2025 – Aug 2025

- Analyzed daily POS and attendance data (30,000+ visitors, \$150,000+ in daily sales) to forecast demand across popcorn, bakery, and merchandise lines, optimizing replenishment schedules and **reducing stockouts by 40%**
- Built inventory tracking dashboards monitoring sell-through and shrinkage to guide data-driven reorders and promotional displays
- Trained 10 new hires on standardized POS procedures, reducing ramp-up time by 25% and improving transaction accuracy

DP World PLC | *Data Analyst Intern* | Shanghai, China

May 2024 – Aug 2024

- Automated end-to-end data-entry and reporting pipelines with **Power Automate** and **UiPath**, cutting manual entry effort by 25% and improving data accuracy in shipment-tracking logistics
- Built a logistic regression model and 4 interactive **Power BI** dashboards surfacing shipping-route and customer-region patterns for 50+ managers in contract-approval workflows; developed a Python web scraper to backfill missing client records
- Authored 2 user manuals and trained 20 staff across IT, Finance, and Operations, driving adoption of the new RPA processes

PROJECT EXPERIENCE

AI Industry Monitor & LLM Benchmarking Platform

Mar 2026

- Developed a full-stack platform (Next.js, React, OpenAI API) pairing a real-time global map and dashboard of AI-industry news, regulation, and market impact with an LLM benchmarking arena
- Designed a rule-based alert engine over multi-source market and news signals that generates AI-assisted analyst briefs at custom severity and industry thresholds
- Benchmarked frontier LLMs** (Claude, ChatGPT, Gemini) on portfolio performance, comparing real-time equity curves, win rates, and decision reasoning to guide model selection
